Vision

Ghana forests, managed and grown by 1.3 million farmers, hold large stocks of carbon and play a major role in the global carbon cycle and climate regulation. They possess unique biodiversity and provide an immense source of healthy fruits. The acknowledgment that forests are valuable capital, could incentivize adoption of sustainable agricultural practices within these forests, and decrease deforestation.

AMMFI's FinTech platform integrates cutting-edge Remote-Sensing technologies, Agro-Forestry algorithms, and financial instruments to turn nature values into financial income for farmers and processors.

Mission

01

Provide multi-national companies operating in the fruit-tree market a certified, monitored and cost-effective impact analysis for mandatory ESG reporting and Carbon Offsetting.

02

Provide Ghanaian fruit-tree growers access to AMMFI's financial platform, that enables them to receive an additional income for the ecosystem services maintained. AMMFI FinTech is designed for small-scale farmers to benefit from the forest capital.

03

Enable fruit-tree processors a bilateral certified Carbon offsetting digital platform, to reduce ecological footprints, and to increase their ability to meet sustainability goals, higher productivity, and profitability.

04

Incentivizes small-scale farmers to adopt sustainable agricultural practices, reduce deforestation and forest degradation by adopting AMMFI's FinTech platform, including simple and informative data on their productive ecosystem.
